**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of Group I, claims 1-7 in the reply filed on 4/11/08 is acknowledged.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 3 recites the limitation "the CV" in lines 1 and 2. There is insufficient antecedent basis for this limitation in the claim. Additionally, it is not clear what the abbreviation of "CV" means.

4. Claim 5 recites the limitation "the plasticizer" in lines 1 and 2. There is insufficient antecedent basis for this limitation in the claim.

5. Claim 7 recites the limitation "the total molecular weight of the acyl groups per glucose unit" in lines 1 and 2. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-7 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Maurer et al., US 6,207,601.

The patent issued to Maurer et al., teach a melt-blown non-woven comprising a cellulose ester fiber with a mean diameter of less than about 10 microns and a degree of substitution ranging from 1.5-3.0 (abstract). With regard to the claimed plasticizer, Applicant includes a range that includes zero. As such, the Examiner considers such a range to include no amount of plasticizer.

Maurer et al., does not explicitly teach the claimed amount of acyl groups per glucose, however, it would be obvious to one having ordinary skill in the art to optimize the amount of acyl units as a function of desired end use of the cellulose ester. It has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F. 2d 272, 205 USPQ 215 (CCPA 1980).

Maurer et al., does not teach the claimed glass transition temperature, strength or CV properties, however, it is reasonable to presume that said properties are inherent to the melt-blown non-woven of Maurer et al. Support for said presumption is found in the use of like materials such as a cellulose ester fiber and the use of like processes such as forming a non-woven, which would result in the claimed glass transition temperature, strength and CV properties. Applicant is invited to prove otherwise. *In re Fitzgerald* 205 USPQ 594

In addition, the presently claimed glass transition temperature, strength and CV properties would obviously have been present once the melt-blown non-woven of Maurer et al., is provided. *In re Best*, 195 UPSQ 433
